

The general idea of the website is similar to a dashboard for Chinese and US investments overseas. We'd like to give a picture of how they're distributed over space and time.

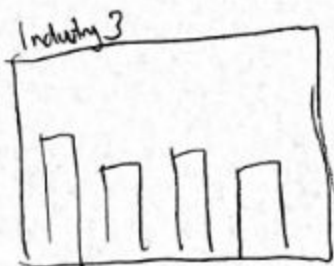

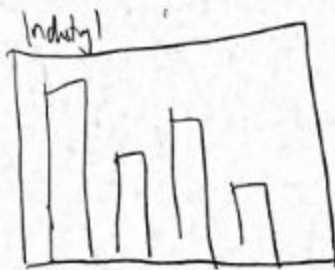

We want to focus on Chinese investments overseas here. The AEI China Investment Tracker has very rich data.

Map of Chinese Investments by Country

We'd like to display a map of Chinese investments around the world. We want users to explore by country and by year.

Charts of Investments by Industry

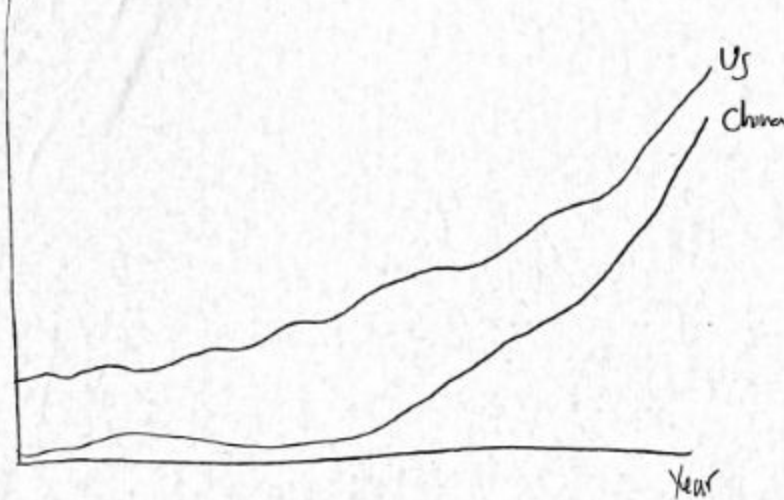

There should be some metrics here. Broad numbers e.g. total investments by year. Sorted by categories like countries, sectors, investor, region.

US-China Competition in SE Asia

This section is on US-China competition specifically.

Total Investment

This will be a metric to show US-China competition. FDI outflows between the two tell a story.

US Investments over time

China Investments over time

We'd like to visualize the competition comparing investment amounts from the two countries in a specific region. One choice could be SE Asia. In this case, there will be two heat maps side-by-side. Another option is Africa where there's a lot more countries.

We'd also like to extract more insights from the FDI to Africa dataset. Total yearly investments from China/US by country would be interesting to see.
